Accounts Receivable, v1.7 Patch 4

EXECUTIVE SUMMARY

The Accounts Receivable (A/R) package automates the management of accounts receivables, including the setup of sites to function in parent/satellite relationships and effectively handle collection, billing, posting, and reporting activities.

Patch 4 of version 1.7 of the A/R package corrects 4 known errors and revises several options within the ERA Posting menu. One major area addressed by this patch makes accommodations for the new HIPAA 835 V4010 transaction. Additionally, this patch offers improved assistance to users when reviewing and posting Electronic Remittance Advices (ERA). This patch contains enhancements to the Load New Import (NEW), Review Postable Claims (REV), and Post ERA Claims (PST) options. The Report ERA Claims (RPT) report option has been completely rewritten for the HIPAA 835 file format.
